

Life is a Presentation present yourself well

Quality captures, seamless live streaming and excellent archiving.

wowRIPPLE is a cost effective capturing and streaming solution for educational institutions, corporate sector or government – any application where there is a requirement to record, manage and deliver media content. wowRIPPLE transforms your audio and visual aids into interactive media rich presentations which you can stream live or on demand. This affordable, unified solution is easy to use and will integrate seamlessly with your existing system.

The wowRIPPLE allows you to capture 2 video sources (front camera, rear camera or document camera or DVD player,) and 1 VGA presentation (laptop/desktop) along with your audio (microphone/line-in).

A perfect solution for distance learning and corporate training, wowRIPPLE is a great tool for improving the learning experience of your students and your staff. Evidence shows that a visual aid to learning will improve performance and understanding and with access to live and on demand content anywhere, anytime, wowRIPPLE really gives your students and staff the competitive advantage.

The added benefit of the wowRIPPLE is that, unlike other products, wowLIVE can capture two video sources and a VGA (1920x1200) simultaneously giving the user greater flexibility on how and what they capture.

This synchronised stream can then be recorded to a disc or if you are connected to a network, streamed live to remote viewers. The content can also be published directly to CDs, DVDs or USB devices, as well as being shared through a command server. Online presentation catalogues are automatically created by wowRIPPLE requiring no web based expertise from the user.

The real advantage of wowRIPPLE is in its simplicity. This one box solution allows presenters to present – simply plug and play - rather than involve themselves in new technologies or complicated hardwares.

Quick and easy to set up, wowRIPPLE does all the work, leaving the presenter free to concentrate on presenting. As no post production is required, attendees can take a copy of the presentation they have just seen away with them immediately on a CD or USB.

The viewer requires only a standard browser to watch presentations. wowRIPPLE will accommodate a number of different presentation sources such as laptop, document camera and satellite receiver, etc.

With a full suite of menu-based management options, it is easy to schedule recording to specific dates and times, adjust settings, download and play recordings or view and record simultaneously. Start/stop schedules can be put in place in advance of recording to avoid any live errors.

Providing a comprehensive webcasting solution, including podcasts, the wowRIPPLE Streaming Solution will support up to 1080p, 60Hz signal capture. Designed to integrate easily with existing AV and IT infrastructure, wowRIPPLE can capture from any meeting room, classroom, or live corporate events.

A perfect solution for distance learning and corporate training, wowRIPPLE is a great tool for improving the learning experience of your students and your staff.

EDUCATION

Instant and Continual Access to Learning Materials

The ability to record and webcast allows you to reach a wider audience, including distance learners and part time students who cannot attend lectures in person. Each student can effectively store the lecture on their laptop or mobile device enabling them to return to and review at their convenience.

The student can also benefit from exact replication of the teaching materials, for example complex data or graphics are recorded within, they don't need to rely on taking exact notes during the lecture. The institution can also quickly and cost effectively build a resource library which can be turned into e-learning programmes or online courses. The benefits are not only student side, but staff can take advantage of professional collaboration opportunities, sharing data for research or for training.

CORPORATIONS

Increase Productivity And Save Money At The Same Time

The ability for the corporate sector to make the information they have literally go further is good news in terms of staff training, communication and overall efficiency. With wowRIPPLE information can be webcast securely live over the internet, recorded for future use and made available for secure download by authorised persons.

For corporations with remote employees or agents, wowRIPPLE gives the opportunity to address all at the same time in a cost and time effective method. Ideal for briefings and webinars, communications can be sent to each employee to be watched on demand, increasing their productivity. Training and communications become standardized and deployed to all employees, internal or external, at the same time. For corporations, the cost savings in terms of travel and non-productive time are significant.

HEALTH CARE

Delivering Detailed Information Securely

Delivery of time sensitive, detailed information is critical within the healthcare sector. wowRIPPLE not only allows you to record and communicate this information live over the internet without the danger of any of that information being lost or deleted. This also means that extremely detailed information can be shared between locations, such as medical results or training materials.

and many more...

SPECIFICATIONS

Connectors	1 D-Sub (VGA), 2 BNC (CVBS) & 1 3.5 mm Phone Jack (Audio Line In) audio signal
CVBS Input Standard Captured VGA Signal format	PAL/NTSC, from 40 x 30 up to 2048 x 1536 pixels , FPS: 1-100 Frames/sec, YUY2/I420/RGB24/RGB32, proVEOS CD disc x 1, Easy Installation Guide CD x 1
Output Format for Captured CVBS Signals	From 176 x 144 to 720 x 576 pixels, Number of FPS: up to 30 Frames/sec, UYVY/YUY2/I420/RGB24/RGB32
VGA Timing Support	Auto detect following video timing standards: GTF/CEA/DMT/IBM PC/Apple/VESA
Video Processing Functions	RGB/YUV Conversion, 5-tap image Scale, Motion-adaptive de-interlacer with edge directed field interpolation, Gamma Correction
Audio A/D Performance	Audio Channel Number: 2 Channels, Sampling Frequency: 8/16/22.05/32/44.1/48/96Khz, Sampling Precision: 24 bit, Signal-to-Noise Ratio: ≥ 90 db
VGA A/D Performance	500 MHz bandwidth for analog channel, maximum 205MSPS sampling rate
CVBS A/D Performance	10 bit sampling precision, 4 times oversampling,5-line adaptive comb filter
